#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicant has repeatedly used the phrase "aligning data transmitting timing of a plurality of lanes" in both the specification and claims [claims 1, 11, 13, 14, 21-24, and 26-28]. From applicant's disclosure, it is apparent that the applicant's intent is to provide a system and method that mitigates the effects of differences in transmission times along parallel data paths ("lanes", per applicant's terminology) by selectively adjusting and delaying the time at which the data arrives – e.g. "aligning" the data at the receiver. However, the meaning of the phrase "aligning data transmitting timing of a plurality of lanes" is unclear, and may be interpreted to mean something else entirely. For example, "aligning data transmitting timing of a plurality of lanes" may be read to mean "aligning data that transmits timing information for a plurality of lanes". Additionally, the examiner notes that the data is what is being aligned, with the transmission time being adjusted in order to align the data.

Based on applicant's disclosure, the examiner recommends amending all instances of the phrase to read as "aligning the data at a receiver by adjusting the transmission time for a plurality of lanes", or something similar.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 24-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Schanke et al, U.S. Patent Application Publication No. 2004/0228429 A1.

Regarding claim 24, Schanke teaches a method comprising:

transmitting a plurality of test data sets on each lane; and

aligning the data transmitting timing of each lane according to a transmitting status of a test data set on each lane [paragraphs 0008, 0014, 0095-0097].

Regarding claim 25, Schanke teaches that the test data set comprises a plurality of COM symbols and a plurality of SKP symbols [paragraph 0086].

Regarding claim 26, Schanke teaches that the data is aligned according to the number of COM symbols and the number of SKP symbols within each lane.

Regarding claim 27, Schanke teaches that when the last COM symbol within the data sets is detected, aligning the data of each lane by the number of COM symbols and the number of SKP symbols.

Regarding claim 28, Schanke teaches determining an offset value of each lane according to the test data sets; and

aligning the data of each lane by said offset value [adjusted for the missing skip symbol, paragraph 0095].

**Art Unit: 2115** 

Regarding claim 29, Schanke teaches determining the amount of delay applied to each lane by an offset value.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Lau et al., U.S. Patent No. 6,578,092 B1;

Sato et al., U.S. Patent No. 6,359,815 B1;

Mitchell et al., U.S. Patent Application Publication No. 2005/0024926 A1;

Renaud et al., U.S. Patent Application Publication No. 2005/0141661 A1;

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ji H. Bae whose telephone number is 571-272-7181. The examiner can normally be reached on Monday-Friday, 10 am to 6:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Lee can be reached on 571-272-3667. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
